

Vertical Rolling Planters

Vertical Planting System, Mobile Green Walls

Because all Rolling Planters have superior construction, the planters are able to handle our Vertical Planter Systems. The Vertical Planting System can be mounted on any Craftsman or Prairie Style planters except for the narrow cafe/balcony models. The Vertical Planter System provides adjustable height rails to support Sky Box Planters, Pot Shelf Decks, Hanging Planters or Arbors. Rails can also be strung between two or more planters, whereby sitting benches, potting benches, pergolas and even privacy screens can be incorporated in the system.

There are two types of Sky Box Planters: 10" and a 15.5" sizes and two types of Hanging Planters: 3' and 4' sizes. The planters are held on to the rail that span between each vertical tower. The rails and planters can be easily changed to different heights. The Sky Box Planters are perfect for plants that have runners and vines (Instead of training the plants to climb we made it so the plants can actually cascade downward making it easier to service and to harvest.)The Hanging Planters are perfect for herbs, flowers or succulents.

The Vertical Framework are shipped in a knockdown form requiring some assembly. Each rail and vertical frame are pre-drilled for heavy wood screw fastening and are provided with a smooth sanded finish. Vertical Frames can be ordered with optional oil and stain finishes. 8 foot planters require an additional vertical tower additional rail support.
